

GrowthOS — QA Testing Checklist

Version: Post-audit (commit `f703642`) **Tester:** _____ **Date:** _____ **Environment:** _____
☐ Production (growthos-blond.vercel.app) ☐ Local dev (localhost:3000)

How to use: Work through each section in order. Mark each item:

-  **Pass** — works as expected
-  **Fail** — broken or crashes (add note)
-  **Partial** — works with issues (add note)
-  **Skip** — not applicable / not configured

Add notes in the **Result / Notes** column. File issues for anything marked  or .

Section 1 — Authentication & Account Setup

#	Test Step	Expected Result	Result / Notes
1.1	Navigate to the app root URL	Landing page loads; "Get started" or sign-in CTA visible	
1.2	Click "Sign up" / "Get started"	Clerk sign-up page loads	
1.3	Create a new account with email + password	Account created; redirected into app	
1.4	Sign out	Redirected to landing / sign-in page	
1.5	Sign back in with same credentials	Lands back in app (dashboard or /get-started)	
1.6	Try to access <code>/leads</code> while signed out	Redirected to sign-in (not a 500)	
1.7	Try Google OAuth sign-in (if available)	OAuth flow completes and returns to app	

Section 2 — Onboarding Wizard (5 Steps)

Start from a fresh account that has not completed onboarding. URL: `/get-started`

#	Test Step	Expected Result	Result / Notes
Step 1 — Your Business			
2.1	Wizard loads at <code>/get-started</code>	Step 1 of 5 shown; progress bar visible	
2.2	Leave business name blank and click Next	Next button disabled or validation error shown	
2.3	Enter a business name (min 2 chars)	Next button becomes enabled	
2.4	Enter an invalid website URL (e.g. "notauri")	Warning shown; Next button disabled	
2.5	Enter a valid website URL (e.g. https://example.com)	No error; Next enabled	
2.6	Leave website URL blank	Allowed — it's optional; Next still enabled	
2.7	Click Next → advances to Step 2	Step 2 "Your goal" shown	
Step 2 — Your Goal			
2.8	See goal tile options	At least: Bookings, Leads, Sales, Awareness tiles shown	

2.9	Click each goal tile	Tile highlights; only one selected at a time	
2.10	Click Next without selecting	Next disabled	
2.11	Select a goal and click Next	Advances to Step 3	
Step 3 — Your Offer			
2.12	Offer text field is shown	Placeholder text guides the user	
2.13	Type a one-sentence offer description	Character count or field accepts input	
2.14	Click Next → advances to Step 4	Step 4 "Photos" shown	
Step 4 — Photos			
2.15	Step 4 loads	Logo URL and photo URL fields shown	
2.16	Paste a valid image URL into Logo field	Field accepts it	
2.17	Paste valid image URLs into Photo URLs	Field accepts them	
2.18	Skip all fields and click Next	Allowed — photos are optional	
2.19	Click Next → advances to Step 5	Step 5 "Launch page" shown	
Step 5 — Launch Page Preview			
2.20	Preview of the lead capture page renders	Business name, offer text, and CTA visible in preview	
2.21	Public slug shown (e.g. <code>/p/my-business/...</code>)	Readable, URL-safe slug generated from business name	
2.22	Click "Launch" / "Finish"	Onboarding marked complete; redirected to <code>/leads</code> or dashboard	
2.23	Visiting <code>/get-started</code> again after completion	Redirects away (to <code>/leads</code>) — can't re-run wizard	

Section 3 — Lead Capture Page (Public)

The public lead page lives at `/p/[tenantSlug]/[pageSlug]`. Get the URL from Step 5 of onboarding or Settings → Account.

#	Test Step	Expected Result	Result / Notes
3.1	Open lead page URL in incognito / while signed out	Page loads with business name, offer, and contact form — no auth required	
3.2	Submit form with name only (email + phone blank)	Submission accepted; thanks message or redirect shown	
3.3	Submit form with name + valid email	Submission accepted	
3.4	Submit form with name + invalid email (e.g. "notanemail")	Validation error shown; submission rejected	
3.5	Submit form with name + phone number	Submission accepted	
3.6	Submit the form twice rapidly	Rate limit kicks in on the second attempt (429) or a user-friendly message shown	
3.7	Check Leads page (<code>/leads</code>) after submission	New lead appears in the list	

3.8	Lead page looks correct on mobile screen size	Layout is responsive; form usable on small screen	
-----	---	---	--

Section 4 — Leads Management

URL: `/leads`

#	Test Step	Expected Result	Result / Notes
4.1	<code>/leads</code> loads after onboarding	List of leads shown (or empty state message)	
4.2	Each lead shows name, email/phone, source, date	Correct data displayed	
4.3	Change a lead's status to "Contacted"	Status updates immediately	
4.4	Change status through all options: New → Contacted → Booked → Won → Lost → Archived	Each transition saves correctly	
4.5	Click Delete on a lead	Inline confirm appears ("Are you sure?") — NOT a browser dialog	
4.6	Confirm delete	Lead removed from list	
4.7	Cancel delete	Lead remains; no change	
4.8	Empty state	If no leads: friendly empty-state message shown (not a blank page)	

Section 5 — Post Studio (Create & Post)

URL: `/create`

5A — Page Load & Media

#	Test Step	Expected Result	Result / Notes
5.1	Navigate to <code>/create</code>	Post Studio loads; loading spinner shown briefly then content appears	
5.2	Media panel is visible	Upload button and empty media library shown	
5.3	Upload an image (JPG/PNG/WEBP, under 50 MB)	Image appears in media library; auto-selected	
5.4	Upload a video (MP4, under 50 MB)	Video thumbnail appears in library	
5.5	Upload a file with disallowed type (e.g. .exe, .pdf)	Error message: "Unsupported file type"	
5.6	Upload a file over 50 MB	Error message: "File is too large"	
5.7	Select an uploaded image	Image appears in platform preview on the right	
5.8	Delete an uploaded image	Confirm prompt appears; image removed from library	
5.9	Media library persists across page refreshes	Previously uploaded images still appear	

5B — Copy & Platform

#	Test Step	Expected Result	Result / Notes
---	-----------	-----------------	----------------

5.10	Platform selector (Instagram / Facebook)	Switching platform updates preview and validation rules	
5.11	Type a hook, caption, and hashtags manually	Fields accept input; character count shown if applicable	
5.12	Alt text field accepts input	Field available and saves	
5.13	Platform preview updates as you type	Live preview reflects hook/caption/hashtags	
5.14	"Copy post" button	Copies formatted text to clipboard; confirmation message shown	

5C — Save & Schedule

#	Test Step	Expected Result	Result / Notes
5.15	"Save draft" button with empty fields	Button disabled — requires at least caption, hook, hashtags, or media	
5.16	Add a caption and click "Save draft"	Button shows "Saving..." while in flight; success (page refreshes or draft appears in list)	
5.17	Double-click "Save draft" rapidly	Only one draft created (button disabled during submission)	
5.18	Resume a saved draft	Draft appears in drafts list; clicking it populates Studio	
5.19	Delete a draft	Confirm prompt; draft removed from list	
5.20	"Schedule post" with no date set	Button disabled	
5.21	"Schedule post" with no caption	Button disabled	
5.22	Set a schedule date/time and click "Schedule post"	Button shows "Scheduling..."; success message or redirect	
5.23	Double-click "Schedule post" rapidly	Only one scheduled post created	
5.24	Scheduled post appears in Analytics → Posts by status	Counted under "Scheduled"	

5D — Drafts List

#	Test Step	Expected Result	Result / Notes
5.25	Drafts list shows saved drafts	List visible on <code>/create</code> page sidebar/panel	
5.26	Active (resumed) draft is visually highlighted	Clear visual distinction from other drafts	
5.27	Switching between drafts	Studio state resets to selected draft's content	

Section 6 — AI Features

Requires API keys added in Settings → API Keys. Test each provider independently.

6A — Anthropic API Key (AI Copy Generation + Copilot)

#	Test Step	Expected Result	Result / Notes
6.1	Go to Settings → API Keys	Three provider cards shown (Anthropic, OpenAI, ElevenLabs)	
6.2	Enter an invalid Anthropic key (wrong format)	"Add" blocked or an error shown	
6.3	Enter a valid Anthropic key (starts with <code>sk-ant-</code>)	Key saved; "last 4" characters shown; source shows "tenant"	

6.4	Return to <code>/create</code> , click "Generate copy with AI"	AI generates hook, caption, hashtags, alt text; fields populate	
6.5	Switch platform (Instagram ↔ Facebook) then generate	Output adapts to platform	
6.6	Add an optional photo description and generate	AI incorporates the description	
6.7	Generate with no photo description	AI still generates generic copy	
6.8	AI Copilot chat (sidebar) — type a question	Response streams in	
6.9	Copilot uses business context	References your business name or offer	
6.10	Remove Anthropic key	Key removed; fallback reply shown in copilot instead of AI response	

6B — OpenAI API Key (AI Image Generation)

#	Test Step	Expected Result	Result / Notes
6.11	Enter a valid OpenAI key (starts with <code>sk-</code>)	Key saved with last 4 shown	
6.12	In Studio → Enhance tools → Generate image	Text prompt field appears	
6.13	Enter a prompt and click Generate	Image generated and added to media library; auto-selected	
6.14	Generated image appears in platform preview	Preview updates with new image	
6.15	Remove OpenAI key	"Add your OpenAI API key" message shown instead of generate button	

6C — ElevenLabs API Key (AI Voiceover)

#	Test Step	Expected Result	Result / Notes
6.16	Enter a valid ElevenLabs API key	Key saved with last 4 shown	
6.17	In Studio → Enhance tools → Generate voiceover	Voiceover generated from caption text; audio asset added	
6.18	Audio asset appears in media library	Audio file visible	
6.19	Remove ElevenLabs key	"Add your ElevenLabs API key" message shown	

Section 7 — Social Media Connections

Settings → Connections. Each OAuth flow requires the respective app credentials configured in Vercel env vars.

7A — Facebook & Instagram (Meta)

#	Test Step	Expected Result	Result / Notes
7.1	Go to Settings → Connections	Meta, TikTok, Canva connection cards visible	
7.2	Click "Connect Facebook / Instagram"	Redirected to Facebook OAuth consent screen	
7.3	Approve permissions on Facebook	Redirected back to app; success banner shown	
7.4	Settings → Connections shows Facebook as Connected	Green/connected status indicator	
7.5	Settings → Connections shows Instagram as Connected (if IG business account linked to the FB page)	Green/connected status	
7.6	Click "Disconnect" on Facebook connection	Confirmation; connection removed	

7.7	Reconnect after disconnect	OAuth flow works again	
7.8	Schedule a post to Instagram (requires connection)	Post enters Scheduled state	
7.9	Wait for Inngest cron (every 5 min) or trigger manually	Post status changes to Published; post appears on Instagram	
7.10	Schedule a post to Facebook	Same publish flow works for Facebook	

7B — TikTok

#	Test Step	Expected Result	Result / Notes
7.11	Click "Connect TikTok"	Redirected to TikTok OAuth consent screen	
7.12	Approve permissions	Redirected back; success banner shown	
7.13	TikTok shows as Connected	Connection status shows connected	
7.14	"Copy post" for a TikTok post	Copies text; message says "Open TikTok, upload your video, and paste the caption"	
7.15	Disconnect TikTok	Connection removed	

7C — Canva (Optional)

#	Test Step	Expected Result	Result / Notes
7.16	Click "Connect Canva" (if Canva credentials configured)	Redirected to Canva OAuth	
7.17	Approve Canva permissions	Redirected back; Canva connected	
7.18	In Studio → "Edit in Canva"	Canva design opens in new tab	
7.19	Design in Canva and return	(Optional: verify design can be imported back)	

Section 8 — Auto-Replies

URL: `/auto-replies` . Requires Instagram connected via Meta OAuth.

#	Test Step	Expected Result	Result / Notes
8.1	Navigate to <code>/auto-replies</code>	Three preset cards shown: Comment Info, Welcome DM, Comment Link	
8.2	Comment Info preset is shown with toggle	Toggle shows current state (on/off)	
8.3	Toggle Comment Info ON	Setting saves; banner "Auto-reply setting saved" appears	
8.4	Toggle Comment Info OFF	Setting saves; banner appears	
8.5	Welcome DM preset visible	Toggle and description shown	
8.6	Toggle Welcome DM ON	Saves correctly	
8.7	Comment Link preset visible	Toggle and description shown	
8.8	Toggle Comment Link ON	Saves correctly	
8.9	Preset descriptions reference your lead page URL	Your actual <code>/p/...</code> URL shown in the preview	
8.10	Comment on your IG post with "INFO" (live test)	Bot auto-replies with your lead page link (within ~1 min)	
8.11	DM your IG account for the first time (live test)	Welcome DM received (within ~1 min)	

8.12	DM again from same account	No second welcome DM sent (first-contact-only)	
8.13	Same comment/message delivered twice by Meta	Only one auto-reply sent (dedup working)	

Section 9 — Brand Settings

URL: `/settings/brand`

#	Test Step	Expected Result	Result / Notes
9.1	Navigate to <code>/settings/brand</code>	Page loads; photo upload panel visible	
9.2	Upload a brand photo (image file)	Photo appears in brand photo grid	
9.3	Upload up to 6 photos	All accepted; 7th upload rejected with a message	
9.4	Delete a brand photo	Photo removed from grid	
9.5	Brand photos available in Post Studio media library	Uploaded brand photos appear in <code>/create</code> media panel	

Section 10 — Analytics

URL: `/analytics`

#	Test Step	Expected Result	Result / Notes
10.1	Navigate to <code>/analytics</code>	Page loads with stat cards and breakdown charts	
10.2	"Total leads" stat card shows correct count	Matches number of leads in <code>/leads</code>	
10.3	"Open leads" shows new + contacted + booked	Correct subset	
10.4	"Won" shows won leads count	Correct	
10.5	"Posts published" count is correct	Matches published posts	
10.6	Leads by status breakdown bar chart	Each status (New, Contacted, Booked, Won, Lost, Archived) shown with count and bar	
10.7	Posts by status breakdown	Draft, Scheduled, Published, Copied, Failed shown	
10.8	Engagement events breakdown	Page views, clicks, form submits, bookings, DMs shown	
10.9	"X new this week" hint on Total Leads	Correct count for leads created in last 7 days	
10.10	Stats update after adding a new lead via the public form	Refresh analytics; total increases	
10.11	Stats update after publishing a post	Published count increases	

Section 11 — Settings Pages

11A — Account Settings

#	Test Step	Expected Result	Result / Notes
11.1	Navigate to <code>/settings/account</code>	Account info visible	
11.2	Business details shown (name, goal, offer)	Reflects onboarding data	

11B — API Keys

#	Test Step	Expected Result	Result / Notes
11.3	Navigate to <code>/settings/api-keys</code>	Three provider cards: Anthropic, OpenAI, ElevenLabs	
11.4	Source label shows "env" when key set via env var	"From environment" or similar	
11.5	Source label shows "tenant" when key set via UI	"Your key" or similar	
11.6	Tenant key takes priority over env key	UI key used even if env var is set	
11.7	Remove a tenant key	Falls back to env key (if set)	

11C — Connections

#	Test Step	Expected Result	Result / Notes
11.8	Navigate to <code>/settings/connections</code>	Meta, TikTok, Canva cards shown with connection status	
11.9	Unknown <code>?error=</code> param in URL	Safe generic message shown — not the raw URL param	

Section 12 — Navigation & General UX

#	Test Step	Expected Result	Result / Notes
12.1	All nav links work: Leads, Create, Auto-Replies, Analytics, Settings	Each page loads without error	
12.2	AI Helper floating button (non-/create pages)	FAB visible; opens chat panel on click	
12.3	AI Helper chat sends and receives messages	Chat works end-to-end (with Anthropic key)	
12.4	AI Helper hidden on <code>/create</code> page	FAB not shown on Create & Post (embedded copilot used instead)	
12.5	Flash banners / success messages appear and are readable	Not persisting after browser refresh	
12.6	App loads correctly on mobile viewport (375px width)	No overflow; nav usable; forms functional	
12.7	App loads correctly on tablet viewport (768px)	Layout adapts appropriately	
12.8	Dark mode (if supported by OS preference)	UI switches to dark theme; text readable	
12.9	Unhandled error (e.g. force a bad route)	Custom error boundary shown — not Next.js white screen	
12.10	Browser back/forward navigation	No blank pages or broken state	
12.11	Refresh on any protected page while signed in	Page reloads correctly (no auth loop)	

Section 13 — End-to-End User Journey

Run this as a complete walkthrough — the "happy path" for a new small business owner.

#	Step	Expected Result	Result / Notes
13.1	Sign up with a new email	Account created	
13.2	Complete all 5 onboarding steps	Redirected to Leads dashboard	
13.3	Open lead page in incognito; submit a lead	Lead appears in Leads list	
13.4	Change lead status to Contacted	Status saved	
13.5	Go to Create; upload a photo	Photo in library	
13.6	Add Anthropic API key in Settings	Key saved	
13.7	Generate AI copy for Instagram	Hook, caption, hashtags populate	
13.8	Save as draft	Draft saved	
13.9	Connect Facebook/Instagram via Meta OAuth	Connected status shown	
13.10	Return to draft; schedule post 10 min from now	Post enters Scheduled state	
13.11	Check Analytics	Lead count = 1, post scheduled count = 1	
13.12	Wait for Inngest cron to fire	Post published to Instagram; Analytics published count = 1	
13.13	Enable "Comment Info" auto-reply	Toggle on; setting saved	
13.14	Comment "INFO" on the published IG post from another account	Auto-reply received within ~1 min	

Bug Log

Use this table to track any failures found during testing.
